

Which is Best- Dry Carpet Cleaning or Steam Carpet Cleaning?

Carpet cleaning has become a necessity these days. The viruses, fungus and bacteria developing inside the carpet can be the reason for a variety of diseases. Experts offer several options to the clients for carpet cleaning. Steam cleaning and dry cleaning are two of the most popular cleaning procedures. Both these processes have their own advantages. To make it easier for you to select one of the methods, we have listed out the differences and benefits:

Carpet Steam Cleaning Perth

Special steam cleaning machines are used to evaporate the water. The steam is produced at a very high temperature. Dirt particles, stains and microbes are removed easily with help of steam coming out with high pressure.

It is the most effective way to sanitize and disinfect the carpet because all the germs are killed with steam. The colour and quality of the soft material is also not affected because of steam.

This method has to be performed strictly by specialists because steam can be dangerous for an unprofessional person. Even marks and spots of steam are left, if the carpet cleaning is not done in the right way. The drying time is not very high because this cleaning method does not require direct use of water.

It is a natural way of cleaning carpet. The risk of allergies and infections are next to zero because of no use of harsh cleaning products.

There are various benefits of carpet steam cleaning process, but don't forget to take help from [carpet cleaning services Perth](#) for convenient and safe work.

Carpet Dry Cleaning

The Steam cleaning process requires some water, but [carpet dry cleaning Perth](#) does not require water. Instead of water, a specific dry cleaning solution is used. The chemical goes deep inside the carpet and react with the dirt and stain. Solution is left to react on the carpet for some time. The chemical compound is rubbed

against the surface of carpet so that the dirt comes out properly. All the debris is finally removed via vacuum cleaner.

The [carpet dry cleaning Perth](#) specialists utilise chemicals for cleaning. The residue left on the carpet can be harmful to the threads. This risk can be avoided by using eco-friendly products.

Both the [carpet cleaning services Perth](#) are effective in removing odour, spots, mould, and dust mites. To select one of them, you can take consultation from a professional company. You can decide the process on basis of various factors like budget, the carpet type, drying time, etc.

Now that you are well-aware of both [carpet steam cleaning Perth](#) and dry cleaning, choose the one that fits your requirement.
